

The Gillespie Approach Newsletter October 2021

STORY HIGHLIGHTS

Ten Weeks of Goopy Eyes: Gillespie Approach Leads to "Instant Healing"

"As we worked the strain out of each eye area, she noted that his eyes immediately seemed better. At the end of the session she saw that his goopy eyes were gone. His eyes were clear for the first time in his life."

—Dr. Barry Gillespie

After 50 years of patient care, I finally saw my first "instant healing."

Mom brought in her ten-week-old fussy son, who presented with the usual issues. After a tongue tie revision at four weeks, he still popped on and off and also had a clicking tongue, colic, and reflux.

On examination he had severe fascial strain from his pelvic floor into his diaphragm. I spent the first visit exclusively in that area. On the next visit mom said he was doing much better, but still had ocular discharge, or goopy eyes.

TOPICAL HEALTH NEWS

National Child Health Day: The Gillespie Approach Can Help Your Child Get Past Headaches and Other Health Conditions

National Child Health Day is observed Monday, October 4. This health holiday recognizes the care and guidance children need to grow strong and healthy.

The Gillespie Approach has an exemplary record of helping children (as well as babies and adults) level up their health.

Children have thrived when they get past headaches and other health conditions that hold them back.

"I look at her body as a traumatized fascial web, adversely affecting the function of the craniosacral system and other structural tissues. For an infant, I can readily engage the entire body. For a child or adult, I can engage the lower and upper halves of the web at each visit."

—Dr. Barry Gillespie in ["The Gillespie Approach for a Child with Headaches"](#)

Learn about a 9-year-old girl's journey with headaches and discover all the ways the Gillespie Approach has helped children over the years.

Is your child or grandchild in need of a health boost?
